

ABSTRACT OF THE DISCLOSURE

A footwear construction including an articulated welt. The footwear includes an upper and an outsole secured together with a welt in the forward portion of the footwear. The welt terminates short of the heel region of the footwear. In one embodiment, the outsole in the heel region is secured to a heel cradle which is further secured the upper. The footwear provides the durability of a welt construction in the forward portion of the shoe and the comfort and cushion of an athletic construction in the heel region of the shoe. A method for constructing the footwear includes securing an outsole to an upper with a welt in a forefoot and/or arch region of the shoe but not the heel region of the shoe. Optionally, a heel cradle is disposed in the heel region of the shoe and the outsole is secured to the heel cradle and/or upper in the heel region.
